Educating and caring for an autistic child is a severely difficult task and is too often associated with frustration and disappointment. As a result, the inner development of children with autism is at times considered beyond the reach of parents and caretakers. This book challenges such assumptions, exploring case studies in which therapy based on a holistic approach has led to significant improvements in behavior and social integration of autistic children. With an extended holistic program, autistic children discover inner self-awareness and self-recognition, leading to human relationships and social skills.

The authors go into detail about both their own practical experience and the findings of others in the field. This new, third edition covers recent developments in diagnostic methods and approaches to treatment, including new case studies and a new chapter on the sensory aspect of autism and Sensory Integration Therapy.

Well-researched and movingly written, this book has an essential, positive message for everyone involved in the care and education of autistic children.
