Will the great innovations of the twenty-first century be American or Chinese? Who is winning the innovation race? And what are the implications for the people of other nations? There is a contest for technological supremacy occurring across the Pacific – a contest of historic importance, for its outcome will shape the world during the coming century and the winner will claim not just economic, military, and political ascendancy, but also superiority in their values and system of government. For those who grasp that technological innovation underlies economic strength, this book unravels some of the most important, but least well understood dimensions of American and Chinese competition. In a succinct, informative, and evidence-based manner, it analyzes whether China can match American levels of invention and innovation. Along the way, it draws conclusions for other nations caught between the Eagle and the Dragon - nations like Australia, Japan, and Korea - who are weighing the advantages of strategic alliances and trade links with both great powers. There has never been more a more important time to understand the implications of escalating American and Chinese competition. For those who believe technological innovation underlies economic strength, this book presents the facts in a straightforward but compelling manner.

Great insight into Innovation and Megapowers

By Lucinda

Between the Eagle and the Dragon is an excellent read, dispassionate, fair and balanced. The book contains well researched and interesting economic history about the two megapowers. So many people have opinions about the rise of China but I think this will be a good companion for you if you want facts rather than assertions. There is also excellent food for thought for countries who trade and partner actively with both nations.

I also found the commentary and insights into innovation and what drives and contributes to an innovative climate to be fascinating. This topic is very timely with debates going on at the organisation, academic and policy levels into "how can we be more innovative"? - I definitely recommend this book for people who are interested in innovation in general.

The author writes very well, is an independent thinker and was recently named by The Australian as one of the most influential people in Australian higher education.

4 of 4 people found the following review helpful.

Fascinating analysis of the state of innovation in China and US

By Rodrigo

A fascinating book which looks in detail at the state of innovation in China and the US. Analyses not just the level of innovation occurring within each superpower, but explains the complex cultural, historical, political and economic factors behind current trends. We're in an incredibly interesting period where American technological dominance really is under challenge.

3 of 3 people found the following review helpful.

The China US comparison grounded in reality

By Winifred

There has been a lot of talk about China and the United States. Much of this talk is not underpinned by reality. This book assembles a stack of extremely useful data and information about innovation, science and education in both countries and offers a balanced perspective for people in all countries trying to come to grips with this new dichotomy.

So many people these days are future gazing. It is refreshing to read a grounded succinct assessment of such a big subject.
