Foreword

It was more than a quarter of a century ago—in February 1968—that my first book, *Memories of the Future*, was published by Econ, a German publisher. I had written the book two years earlier, but rejection letters from publishers fluttered on my desk with great regularity: “Sorry, not usable for our program ... ,” “We are very sorry ... ,” “We don’t want to go this way ... ,” “We recommend a more esoteric publisher....”

In later years I was often asked how this publishing miracle happened, to finally place this controversial work with a renowned textbook house. Today I can finally confess: with outside help and a little discretion.

I met Dr. Thomas von Randow, then the science editor of the weekly *Die Zeit*, in the summer of 1967. He leafed through the neatly typed manuscript, examined some of the peculiar pictures, and decided, “This is not for us. You have to publish it as a book.”

“And how does one find a publisher?”

Dr. von Randow puffed on his pipe, looked me straight in the eyes: “I do know a publisher. I could just give him a noncommittal call, if you wish.”

He picked up the telephone and asked to be connected with Dr. Erwin Barth von Wehrenalp, the chief of Econ Publishing. The blood rushed to my head. After all, I knew what Dr. von Randow could not know: My manuscript had already been turned down by Econ. Naturally, the ensuing conversation stuck in my gray brain cells.

THE SEVEN MILLION COPY BESTSELLER

Chariots of the Gods was immediately recognized as a work of monumental importance when it first introduced the theory that ancient Earth had established contact with aliens.

Erich von Däniken's examines ancient ruins, lost cities, spaceports, and a myriad of hard scientific facts that point to extraterrestrial intervention in human history. Most incredible of all, however, is von Däniken's theory that we are the descendants of these galactic pioneers—and he reveals the archeological discoveries that prove it...

The dramatic discoveries and irrefutable evidence:

- An alien astronaut preserved in a pyramid
- Thousand-year-old spaceflight navigation charts
- Computer astronomy from Incan and Egyptian ruins
- A map of the land beneath the ice cap of Antarctica
- A giant spaceport discovered in the Andes

Includes remarkable photos that document mankind's first contact with aliens at the dawn of civilization.

Hasn't aged well...

By Søren Aabye Kierkegaard "Ed"

I've a strong interest in the "ancient astronauts" theory, and this book is arguably the one that started the whole thing. But having just re-read it after many years, I was left feeling distinctly under-impressed. The book is rambling, disjointed, repetitive, and contains hundreds of unanswered questions. True, von Däniken claims that his purpose was to merely raise the questions rather than provide answers, but it does leave you feeling that you've only read half a book. The way he presents his theories is often sketchy and vague. He doesn't care to consider in any depth what the *purpose* of the extraterrestrial visitors might have been, he is content mainly to claim evidence of their presence. Some of his predictions, such as the human Mars landings, are way off the mark. Moreover, there are many ideas presented in the book but little actual science. His constant pointing out that the American space programme was for a long time based mainly on the work of Nazi scientists is, however, amusing.

The new introduction written by the author is almost laughable. Aside from attempting to riposte a few very specific criticisms of some of his claims, it adds very little to the book.

I'm giving this book 3 stars because of its significance - it set the ball rolling. But if you want a much more detailed, well-rounded, well-researched, thoughtful and better-written survey of our possible ET origins and links, including considerable coverage of the important Sumerian mythology, you'd do much better to read William Bramley's "The Gods of Eden".

I love the show Ancient Aliens (which led me to this) and find the Ancient Astronaut theory interesting, but I am not a fan of this book. It could have been written by a high school student trying to BS his way through an essay. There isn't any real information in it, just wild theories with nothing but ambiguous facts to back them up, and Däniken jumps to conclusions that are really "out there" without any pattern of logic whatsoever. If you're looking for something intellectual, then pass over this book.

Outdated. Further, most of the book consists in the author defending himself against the people who don't believe in his theories. Theories that, at this day and age, are common knowledge. I hope this helps.
